P element mutagenesis 254
zebrafish 71
myc oncogene (c-*myc*) 301
Myelin genes 211

Nerve growth factor (NGF) 139
neu oncogene 247
Neurogenesis
Drosophila 95
vertebrate 139
Neuroleukin (NLK) 143
Neurospora crassa
ATP synthase genes 49
magnification of rRNA 351
mitochondrial intron splicing 181
Neurotrophic growth factors 139
Nicotiana, see Tobacco
Nondisjunction of chromosomes 126
Notch locus, *Drosophila* 95
Nucleic acids, see DNA, RNA

Obesity 206
Oestrogen
receptor 231, 309
regulation of vitellogenin genes 230
responsive element (ERE) 230, 310
Oncogenes
chromosomal translocations 300
E1A 245
int 291
neu, c-*erb*-B-2, HER2 247
myc(c-*myc*) 301
(*see also* names of other individual oncogenes)
Oogenesis 79, 183
Opsin genes 319
Organelle transformation 150
Osteosarcoma 127

P element, *Drosophila* 109, 147
alternative splicing 134
controlled insertional mutagenesis 254
Paired-box genes 215
Parthenogenetic embryos 59
Pathogenesis-related proteins in plants 87
Pax genes 215
Phenylketonuria 53, 123
Photomicrography (br) 145
Photosystem genes, chloroplast 259
Phytochrome 37
pim-1 oncogene 184
Plant molecular biology (br) 56, 208
Plant pathogens (br) 115
Plasmids in eukaryotes 343
Polyacrylamide gel electrophoresis
copper staining (tt) 4
RNase treatment (tt) 270
silver staining (tt) 146
Polyadenylation 243
Polymerase chain reaction 177
screening method for transgenic mice (tt) 325
Polymorphism
colour vision 320
Drosophila loci 107
HLA 129
Polytene chromosomes 90
Population genetics (br) 25, 115
Post-transcriptional control
histone gene RNAs 189, 249
plastid mRNAs 258
polyadenylation 243
Post-translational processing, ATP synthase subunits 49
Potassium channels, *Shaker* locus 297
Prenatal diagnosis 52, 123, 180 (br)
Duchenne muscular dystrophy 27
Haemophilia A 236
Lesch-Nyhan syndrome 177
Progesterone
receptor 309
responsive element (PRE) 230
Promoters/enhancers
bacterial 282, 327
chloroplast genes 258
histone genes 188, 250
nuclear receptor genes 309
phytochrome-responsive 39
plant 16, 39
ribosomal protein genes 66
rRNA genes 65
tissue-specific 1, 230
vitellogenin genes 230
Protein kinases
cell cycle control 275, 287
Drosophila sev gene 76
neu gene product 247
Protein purification (br) 238
Proteolipid protein (myelin) 24
Proto-oncogenes
expression in germ cell development 183
fos 184, 205
int genes in development 291
Protozoa, ciliated 25 (br), 117 (br)
genetic code evolution 195
Pseudoautosomal region 21, 80

RAD genes, yeast 249, 266
raf oncogene 184
ras oncogenes 184
RecA protein 8
Recombinant inbred mouse strains 3, 18
Recombination
chromosomal translocations and inversions 300
fragile sites 121, 122
hotspots 8, 11, 83
intragenic 322
magnification in *Drosophila* 349
protein–DNA interactions 8
site-specific 345
yeast 12, 263
Restriction fragment length polymorphism (RFLP)
Factor VIII gene 236
in retinoblastoma 126
opsin genes 320
prenatal diagnosis 27, 53, 123
tomato gene mapping (tt) 4
Volvox 32
Restriction–modification systems 314
Retinoblastoma 125, 245
Retinoids, retinoic acid
chick limb development 331
keratin gene expression 280
retinoic acid receptor 309
Retrovirus, insertional mutagenesis 274, 291
Ribosomal proteins
genes in plastids 259
synthesis in yeast 66
Ribosome
role in translational control 171
synthesis 64, 67
Ribulose bisphosphate carboxylase genes 14, 38, 259
RNA sequence analysis (br) 26
RNA polymerase
bacterial 282, 327
eukaryotic 65, 271
RNase treatment of gels (tt) 270
ros(v-*ros*, c-*ros*) oncogene 76
rRNA (ribosomal RNA)
genes in plastids 259
magnification in *Drosophila* 348
synthesis in yeast 64

Saccharomyces cerevisiae (budding yeast)
cell cycle, *CDC* genes 249, 275
DNA repair 105, 264
GCN4 gene 169
mating type switching 72, 250, 345
maturases 181
mitochondrial ATP synthase 46
mitochondrial intron splicing 181
mitochondrial transformation 150
recombination 263
ribosome synthesis 64
topoisomerase mutants 271
translational control 169
two-micron plasmid 343
Schizosaccharomyces pombe (fission yeast), cell cycle and *cdc* genes, 275, 287
Schwann cells
myelin gene expression 212
NGF synthesis 140
Seed protein genes 14, 15
Segmentation, *Drosophila* 119, 214
Sequencing
analysis (br) 26, 144, 296
techniques (br) 238
Sertoli cell differentiation 155
sevenless (sev) gene, *Drosophila* 74, 100
Sex determination
C. elegans 337
Drosophila 136, 153, 333, 337
mammalian 153

sex lethal (sxl) gene, *Drosophila* 333, 337
Sex reversed (Sxr) Mice 153
Shaker locus, *Drosophila* 297
shiverer (shi) mutation, mouse 211
Sigma factors 284
Silver staining (tt) 146
Skeletal development 24 (br), 216, 329
snRNPs (small nuclear ribonucleoproteins)
  C. elegans 305
  histone RNA processing 189
  role in polyadenylation 244
Somatic cell hybrids 22, 123
Somatic cell mutants
  hypersensitive to cytotoxic agents 101
  Thy-1 deficient 5
Southern blotting 92
  hybridization efficiency (tt) 328
Spermatogenesis 80, 183
Splicing
  alternative 134, 297, 333
  and gene expression regulation 134
  C. elegans 305
  chloroplast RNAs 261
  fibronectin RNAs 199
  fungal mitochondria 181
Steroid hormone receptors 309
Streptomyces lividans, elimination of contaminants (tt) 325
Supercoiling 111
  role in gene expression 112, 271
SV40 (simian virus 40), T antigen 245
Sxr (sex-reversed) mice 153
Synaptonemal complex 80

T antigen (SV40) 246
T cells
  HLA recognition 129
  Thy-1 expression 5
  tumours 300
T cell receptor 300
t-complex, mouse 273
Tdy locus, mouse 153
Testis-determining factor (TDF) 82, 154, 337
Thyroid hormone receptors 309
Thy-1 glycoprotein 5
Ti-mediated gene transfer 13, 39
Tobacco (*Nicotiana)*
  herbicide resistance 219
  hormone mutants 159
  pathogenesis-related proteins 87
  transgenic 13
Tobacco mosaic virus (TMV) infection 87
Tomato
  herbicide resistance 220
  hormone biosynthesis mutants 158
  RFLP mapping (tt) 4
Topoisomerases
  interaction with cytotoxic drugs 104
  role in supercoiling and transcription 271
Trans-acting factors
  E1A and T antigen 245
  fos- containing complex 205
  ligand-activated nuclear receptors 309
  zinc-finger proteins 155, 167, 214, 231
Transcription
  initiation in prokaryotes 327
  polyadenylation 243
  supercoiling 271
Transformation
  Aspergillus 164
  mediated by E1A and T antigen 245
  organelle 150
transformer (tra) locus, *Drosophila* 136, 333
Transforming growth factor β (TGF-β)
  limb development 332
  mesoderm induction in *Xenopus* 63, 293
Transgenic mice
  cell lineage ablation 1
  expression of *int* genes 291
  imprinting 59
  myelin basic protein (MBP) 211
  production (tt) 152
Transgenic plants 13, 39
  herbicide resistant 219
Translation
  genetic code evolution 191
  initiation, scanning model 169
Translational control 169
Translocations
  in tumour pathogenesis 300
  meiotic pairing failure 81
  X–autosome in mice 153
Transposable elements, *Drosophila* 109, 134, 147, 254
Trisomy
  human 82
  tomato lines, use in gene mapping (tt) 4
Trypanosomes, *trans* splicing 307
Tumour necrosis factor (TNF) 206
Tumours, tumorigenesis
  chromosomal abnormalities 300
  mammary 248, 291
  osteosarcoma 127
  retinoblastoma 125, 245

Vacuum blotting 92
Vg1 and *Xenopus* mesoderm induction 63
Viral replication (br) 239
Vitellogenin genes 227
Volvox carteri, differentiation 32

Wheat breeding (br) 296
Wobble rules 192
Woods Hole lectures (br) 24

X chromosome 91, 153
  dosage compensation 153, 337
  in meiosis 80
  mouse 20, 29, 153
X-linked disease 53
  colour blindness 319
  Duchenne muscular dystrophy 27, 30
  Lesch–Nyhan syndrome 175
Xenopus
  maturation promoting factor (MPF) 275, 289
  mesoderm induction 62
  vitellogenin genes 227

Y chromosome 91
  in meiosis 80
  involvement in magnification in *Drosophila* 350
  mammalian sex determination 153
  mouse 21, 153
Yeast, see *Saccharomyces cerevisiae* and *Schizosaccharomyces pombe*
Yolk proteins 227, 334

Zebrafish development 68
Zinc-finger proteins
  brlA gene product, *Aspergillus* 167
  gap genes in *Drosophila* 214
  human 215
  mouse *mKr1, mKr2* 215
  oestrogen receptor 231
  TDF 155
